

Exercise 33.1 Working with User Accounts

1. Examine `/etc/passwd` and `/etc/shadow`, comparing the fields in each file, especially for the normal user account. What is the same and what is different?
2. Create a `user1` account using `useradd`.
3. Login as `user1` using `ssh`. You can just do this with:

```
$ ssh user1@localhost
```

It should fail because you need a password for `user1`; it was never established.

4. Set the password for `user1` to `user1pw` and then try to login again as `user1`.
5. Look at the new records which were created in the `/etc/passwd`, `/etc/group` and the `/etc/shadow` files.
6. Look at the `/etc/default/useradd` file and see what the current defaults are set to. Also look at the `/etc/login.defs` file.
7. Create a user account for `user2` which will use the **Korn** shell (**ksh**) as its default shell. (if you do not have `/bin/ksh` install it or use the **C** shell at `/bin/csh`.) Set the password to `user2pw`.
8. Look at `/etc/shadow`. What is the current expiration date for the `user1` account?
9. Use `chage` to set the account expiration date of `user1` to December 1, 2013.
Look at `/etc/shadow` to see what the new expiration date is.
10. Use `usermod` to lock the `user1` account.
Look at `/etc/shadow` and see what has changed about `user1`'s password. Reset the password to `user1pw` on the account to complete this exercise.

Solution 33.1

1.

```
$ sudo grep student /etc/passwd /etc/shadow
```

```
/etc/passwd:student:x:1000:100:LF Student:/home/student:/bin/bash
/etc/shadow:student:$6$jtoFVPICHhba$iGFFU8ctr0GoistJ4/30DrNLi1FS66qnn0VbS6Mvm
luKI08SgbzT5.Ic0Ho5j/S0dCagZmF2RgzTvzLb11H0:16028:0:99999:7:::
```

(You can use any normal user name in the place of `student`.) About the only thing that matches is the user name field.

2.

```
$ sudo useradd user1
```

3.

```
$ ssh user1@localhost
```

```
user1@localhost's password:
```

Note you may have to first start up the `sshd` service as in:

```
$ sudo service sshd restart
```

or

```
$ sudo systemctl restart sshd.service
```

4.

```
$ sudo passwd user1
```

```
Changing password for user user1.
New password:
```
5.

```
$ sudo grep user1 /etc/passwd /etc/shadow
```

```
/etc/passwd:user1:x:1001:100:./home/user1:/bin/bash
/etc/shadow:user1:$6$0BE1mPMw$C1c7urbQ9ZSnyiniV0eJxKqLFu8fz4whfEexVem2
TFpucuWRN1CCHZ19XGhj4qVujslRIS.P4aCXd/y1U4utv.:16372:0:99999:7:::
```

6. On either **RHEL 7** or **openSUSE** systems for example:

```
$ cat /etc/default/useradd
# useradd defaults file
GROUP=100
HOME=/home
INACTIVE=-1
EXPIRE=
SHELL=/bin/bash
SKEL=/etc/skel
CREATE_MAIL_SPOOL=yes
$ cat /etc/login.defs
....
```

We don't reproduce the second file as it is rather longer, but examine it on your system.

7. `$ sudo useradd -s /bin/ksh user2`
`$ sudo passwd user2`
Changing password for user user2.
New password:

8. `$ sudo grep user1 /etc/shadow`
user1:\$6\$0BE1mPMw\$CIc7urbQ9ZSnyiniV0eJxKqLFu8fz4whfEexVem2TFpucuWRN1CCHZ
19XGhj4qVujslRIS.P4aCXd/y1U4utv.:16372:0:99999:7:::

There should be no expiration date.

9. `$ sudo chage -E 2013-12-1 user1`
`$ sudo sudo grep user1 /etc/shadow`
user1:\$6\$0BE1mPMw\$CIc7urbQ9ZSnyiniV0eJxKqLFu8fz4whfEexVem2TFpucuWRN1CCHZ
19XGhj4qVujslRIS.P4aCXd/y1U4utv.:16372:0:99999:7::16040:
10. `$ sudo usermod -L user1`

`$ sudo passwd user1`
