

## Exercise 19.3: Building an RPM

In the LFS211\_\*SOLUTIONS.tar.bz2 file is an example of rpm creation. The SOLUTIONS tar ball contains:

- a source code file, `myapprpm-1.0.0.tar.gz`
- a **SPEC** file, `myapprpm.spec`
- and a script, `myfirstrpm.sh` to aid in the construction of the **rpm** file.

The script can be used to build the **rpm** file or as a guide to create the **rpm** manually. After installing the newly created **rpm** file, test the application by running the "myhello" command.
