

Exercise 10.1: Use SCP to copy a folder from one location to another. Create a directory full of testing files to use for this lab:

```
$ mkdir /tmp/transfer-lab/
$ mkdir /tmp/receive/
$ for i in /tmp/transfer-lab/{a,b,c}-{1,2,3}.{txt,log,bin}
do
    echo $i > $i
done
```

Use **scp** to copy just the `.log` files from `/tmp/transfer-lab/`, into `/tmp/receive/` through the localhost interface.

Solution 10.1

```
$ scp /tmp/transfer-lab/*.log root@localhost:/tmp/receive
```
